

An exciting opportunity has arisen for a hard-working and proactive individual to work within a fast-paced, hands-on role leading our sensory team based at a client facility in Biopolis, Singapore as well as providing support in our own facility in the Pandan Loop area when needed.

MMR is an independent, global company specialising in food, drink and consumer packaged goods research. We work regularly with over 50% of the top 100 global food and drink brands. We have offices in London, Oxford, New York, Shanghai, Singapore, Mumbai and Durban and have a team of 200 highly engaged and dynamic research professionals that is multi-discipline in nature covering fields such as data sciences, marketing, insight, R&D, sensory science and psychology.

MMR delivers a class-leading set of marketing science tools and approaches, many of which are proprietary to MMR. We are endorsed by our global client base for our agility and technical expertise and willingness to adapt research solutions to directly focus on specific client challenges. We have built a reputation of providing innovative statistical analysis and techniques, coupled with optimal research design consultancy that successfully delivers against our clients' specific business objectives. MMR's Sensory Science Centres operate across the globe, including UK, USA, China and Singapore. Their aim is to deliver high-quality sensory evaluation and optimizations to fit with our client's specific needs.

As Sensory Manager, you will be responsible for managing a key client account involving developing and maintaining relationships with key stakeholders, managing a team of panel leaders and assistants, assisting with HR issues that arise from running the panels (with support from our HR team), writing proposals and quotations for client projects (relating to panel implementation or management), managing projects and undertaking regular reviews with our client. MMR currently has three sensory panels based at our client facility, therefore an important element of this role is the management of the sensory team including dealing with any recruitment and HR issues in collaboration with our UK-based HR team. There is also scope to have some involvement with our ad-hoc business at MMR's own facility which has a broader sensory scope.

We are looking for a sensory professional who has experience in client handling, running panels, and a background in sensory descriptive analysis. Ideally educated to degree level in a related field, you should have managerial experience and be able to manage your own workload and multi-task effectively. Excellent communication skills are essential.

At MMR, our people are central to MMR's success and therefore we drive a culture where each individual can thrive. Some of the ways we achieve this is by operating in an open, dynamic, varied & non-hierarchical environment, providing bespoke training through the MMR Training Academy, giving overseas secondment opportunities and by promoting our staff purely on merit.

If you would like to join the team, please create an account and upload your CV and covering letter via the recruitment portal on www.mmr-research.com/careers.
